

CURRENT ENGINEERING BASELINE

M1: stdio mediation · M2: replay representations + independent oracle
M3: durable audit · M4: signed evidence / offline checks · M5: expected-run acceptance
M1–M5 are the Evaluation-1 foundation; M6 live lifecycle remains pending.

PLANNED / FINAL EMPIRICAL EVALUATION

E01–E13: no completed final experiments; engineering checks are supporting evidence.

Representation	E01 Order-insensitive controls E02 Matched order-sensitive groups E03 Historical recognition E13 Invariance/explanation
Decision / control	E04 Detector/controller attribution E05 Held-out workflows E06 Live M6 lifecycle
Failure / baseline	E07 Execution/failure boundaries E08 External baseline
Evidence / assurance	E09 Evidence integrity E10 Authentic-but-wrong facts/findings E11 Acceptance
Cost	E12 Cost/scaling

E06 / E08 / E12 prerequisites: NOT STARTED; E08 conformance is pending.
Groups organize the protocol; they do not replace its required execution order.
